

Option #1
Square Block

Option #2
Regular Block

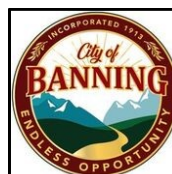

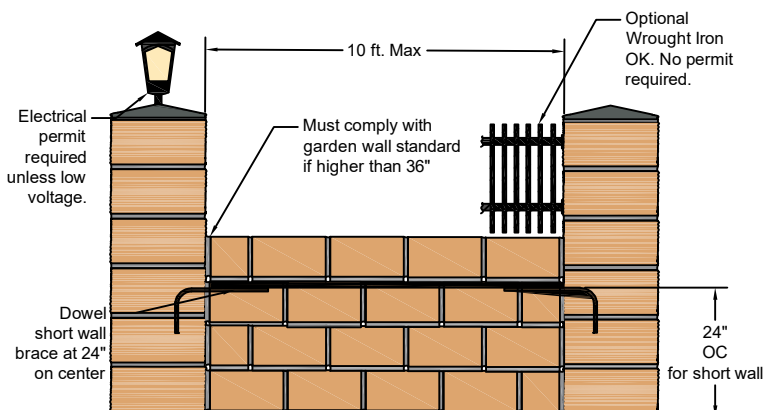

Section View

Pilasters less than 3 ft. in height do not require a permit.

Rebar must be in place at time of inspection for footings and pre-grout.
Final inspection will occur after grout placement and cap.

This design cannot be used to retain soil or to retain any other loads. It cannot support surcharges of building or vehicles. May be used in conjunction with freestanding block wall detail. Pilasters constructed on joint property lines require completion of a block wall agreement with adjoining neighbors. Footings must be placed on undisturbed soil or compacted fill. Electrical permits are required if line voltage lighting features are to be added, not required for low voltage features >18V.
